SUMMARY

I have been a full-stack developer for over 4 years, with experience in web and mobile development and a focus leaning a bit more toward the frontend (UI/UX) with ReactJS and React Native. I also work very well as a full-stack developer and can build a system from scratch using PHP/Laravel, REST APIs, Next.js, JavaScript (ES6+) and TypeScript. Shipping production products for corporate live streaming, live commerce, digital signage, help desk and corporate social networks, responsive and with real-time updates. Experience with MySQL, SQL Server, MongoDB, Redis, Docker, Linux and Git. I use AI every day for automated testing, performance and security.

TECHNICAL SKILLS

Frontend: ReactJS, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Redux, Context API, Tailwind CSS, Styled-Components, Bootstrap, Vue.js, jQuery, React Query (TanStack Query), VTEX FastStore, SPA, componentization and responsive design

Mobile and Desktop: React Native, Expo, React Navigation, push notifications, maps and geolocation, accessibility (VoiceOver and TalkBack), Electron

Backend and APIs: PHP, Laravel, Node.js, NestJS, REST APIs, third-party API integration, LLM API integration (OpenAI/Claude), AI agents, GraphQL (Apollo), Redis, Docker, Nginx, business logic, data modeling, systems integration, Python (scripting, automation and integrations), WebSocket, Socket.IO, Laravel Sanctum, queues and jobs

Databases: MySQL, PostgreSQL, SQL Server, MongoDB, Redis, SQLite

Testing and Quality: Jest, Vitest, React Testing Library, automated testing, code review

DevOps and Tools: Git, GitHub, GitHub Actions, CI/CD, Docker, Linux (Ubuntu), Cloudflare, Vercel

Methodologies: Scrum, Agile

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Frontend focus)
ATMO Comunicação Digital — São Paulo, Brazil | 06/2022 - 07/2026

- Developed the ReactJS frontend and the Laravel backend of an interactive live streaming platform with real-time chat, quizzes, polls and giveaways over WebSocket (Socket.IO) and peaks of 2,000+ concurrent viewers, keeping performance and responsiveness under continuous UI updates, always with UI and UX in mind.
- Implemented the React frontend and the Laravel order-processing backend of a live commerce system, with a multi-step checkout flow and real-time catalog updates during live broadcasts.
- Delivered the React web app and the React Native mobile app built with Expo and push notifications (published on the App Store and Google Play) of a corporate social platform (workplace) used by 100+ employees (50 to 80 daily active users on average), with feeds, profiles, rankings, badges, notifications and gamification, keeping state and UI consistent across web and mobile.
- Delivered, together with a 5-person team, a brand-new internal help desk system in ReactJS and PHP/Laravel, with queues, SLA, notifications and reports, part of the same ecosystem as the company's digital signage platform, replacing a third-party product used across ~300 service seats (BRL 1,400/month per seat) and eliminating an estimated BRL 5M+/year recurring cost. After the rollout, tickets dropped to fewer than 100 per month.
- Designed and evolved REST APIs in PHP/Laravel, with Sanctum authentication and Redis caching, defining the contracts and business logic consumed by the company's web and mobile applications.
- Built a React digital signage management dashboard, integrated with an in-house player, for real-time remote monitoring and updating of a fleet of 1,000+ digital screens.

- Integrated a QR Code meal reservation and validation interface with an independent Python facial recognition service via REST APIs.
- Developed the frontend of an online radio system for uploading, organizing and playing tracks and playlists, backed by Laravel file management.
- Structured UIs as reusable components with Redux, Context API and Tailwind CSS, keeping visual and behavioral consistency across products.
- Worked in an Agile (Scrum) team with automated tests (Jest/Vitest) and CI/CD pipelines, always in a collaborative Git workflow with GitHub Actions, containerized environments using Docker on Linux and deployment on Cloudflare.
- Investigated and fixed production incidents, addressing performance bottlenecks and data inconsistencies across web and mobile applications.

IT Technician
Link-Up Sistemas de Informação — Praia Grande, Brazil | 02/2019 - 04/2022

- Deployed and administered an on-premises SQL Server instance supporting internal web applications, including environment setup and data structuring.
- Deployed and managed internal and external network infrastructure, ensuring availability of the systems used by operations.

Computer Technician
Lorelan Ind. e Comércio LTDA — Brazil | 2015 - 2018

- Installed and maintained computers, networks and CCTV systems.

PROJECTS

Call Center Mailing List Cleansing Automation (Freelance)
Laravel, PHP, CSV/XLS | 2026

- Built a Laravel/PHP system that automates the cleansing of call center dialing lists, previously a manual process, handling spreadsheets averaging 1 million rows each with queued jobs and chunked reading, cutting the process from about a week to one day at most.
- Built an automation that cross-references a mailing list against blocklist, street-address and Anatel databases, with dynamic column mapping for files from different providers (CSV/XLS) and standardized CSV output for the company's in-house dialer.

Generative AI Pipelines (Personal Project)
ComfyUI, Python, Linux | 2026

- Built local image and video generation pipelines with ComfyUI, automating product photos and vertical social media content production.

EDUCATION

Associate Degree in Systems Analysis and Development
Instituto Federal de São Paulo (IFSP), Brazil | 01/2018 - 12/2020

Technical Degree in Electronics and Mechatronics
Fortec, Brazil | Completed 2014

CERTIFICATIONS

ISO/IEC 27001 Information Security Associate
SkillFront | 2026

LANGUAGES

Portuguese: Native

English: Intermediate (daily technical reading and written communication)
